Adding an office printer

Article KB0010076 | Owner: Desktop Support | Subcategory: Printer | Applies to: Windows 11 23H2/24H2 on Dell Latitude 5440/7440, Lenovo ThinkPad T14/X1 Carbon, HP EliteBook 840, Company-managed devices joined to Acme Global's Active Directory via Intune

Summary

This article guides users and service-desk agents through the process of adding an office printer managed by the PaperCut secure-print system on Acme Global's Windows laptops. It covers common symptoms such as "Printer offline", print jobs stuck in the queue, inability to add a printer, and blank-page prints, outlines typical causes, provides a self-help checklist and step-by-step procedure, and details the actions the Desktop Support team should take when escalation is required.

Symptoms

- Printer shows status "Offline" in Devices and Printers
- Print jobs remain in the queue with status "Error - Printing" or "Document failed to print"
- Attempt to add a printer fails with message "Windows cannot connect to the printer. Access is denied" or "The specified printer driver was not found"
- Printer outputs blank pages despite having content in the document

Common causes

- Print Spooler service stopped or malfunctioning
- Network connectivity issue to the print server print.acme.example (VPN or Wi-Fi required)
- Outdated or missing printer driver on the workstation
- Incorrect printer selection (using a generic/text-only driver)
- Low toner or empty cartridge reported by the printer
- PaperCut authentication failure (badge not recognized)

Preliminary Checks

Before attempting to add or reinstall a printer, verify that the device meets the basic prerequisites. This helps avoid unnecessary steps and speeds up resolution.

1. Ensure the laptop is connected to the ACME-Corp Wi-Fi network (802.1X) or is logged into the VPN (GlobalProtect) if working remotely.
2. Confirm that you can reach the print server by opening a browser and navigating to https://print.acme.example - you should see the PaperCut login page.
3. Verify that the Print Spooler service is running: press Win+R, type services.msc, locate "Print Spooler", and check that its status is "Running". If not, right-click and select Start.
4. Make sure your ID badge is active and has sufficient print quota in PaperCut (you can check at https://papercut.acme.example).

Self-Help Procedure - Adding an Office Printer

Follow these steps to add a printer via the official Acme print server. The procedure works for both new installations and re-adding a printer after troubleshooting.

1. Open Settings -> Bluetooth & devices -> Printers & scanners, then click "Add device".
2. Select "The printer that I want isn't listed" and choose "Add a printer using an IP address or hostname".
3. Enter the printer's hostname as provided by your office (e.g., PRN-BLR-01) or use the fully qualified name PRN-BLR-01.prnt.acme.example. Click Next.
4. When prompted for the driver, choose "Have Disk" and browse to the driver package located in the Company Portal under "Printers -> Drivers" (or let Windows download the correct driver from the print server).
5. Complete the wizard, give the printer a recognizable name (e.g., "BLR-Floor-2-Copier"), and optionally set it as the default printer.
6. Print a test page: right-click the printer -> Printer properties -> Print Test Page. If the page prints correctly, the printer is ready for use.

Service Desk Procedure - Desktop Support

When a user cannot resolve the issue with the self-help guide, Desktop Support agents should follow this structured approach. Collect the necessary information, perform remote or on-site checks, and apply the appropriate fix.

1. Gather symptom details: exact error messages, printer model, location, and whether the issue affects one user or multiple users in the same area.
2. Verify network connectivity: ask the user to confirm they are on ACME-Corp Wi-Fi or VPN; test ping to print.acme.example and to the specific printer IP if known.
3. Check the Print Spooler service status remotely via Services MMC or by running sc query spooler; restart if stopped.
4. Inspect the printer queue on the user's machine: open Printers & scanners, select the printer, open See what's printing, and purge any stuck jobs.
5. If the queue clears but printing still fails, remove the printer, then re-add it using the steps in the Self-Help Procedure, ensuring the correct driver is selected.
6. For persistent blank-page outputs, verify toner levels via the printer's web interface or request Facilities to replace the cartridge; also confirm that the correct printer (not a generic/text-only driver) is selected.
7. After resolution, have the user print a test page and confirm normal operation before closing the ticket.

Verification

After completing either the self-help or agent procedure, perform these checks to confirm that the printer is functioning correctly and that the user can resume work.

1. Print a test page from the printer's properties dialog.
2. Send a typical document (e.g., a one-page PDF) from the user's usual application and verify it prints without errors or blank pages.
3. Ensure the user can release the print job at the PaperCut station using their ID badge.
4. Ask the user to confirm that the printer status shows "Ready" in Devices and Printers.

When to escalate

If the printer remains offline, jobs stay stuck, or blank-page printing persists after the Service Desk Procedure, escalate to the Desktop Support senior team (or the Printing & Scanning specialist within Desktop Support). Include in the escalation ticket: user name, device hostname, printer model and location, exact error messages, screenshots of the printer queue and Print Spooler service status, results of network tests (ping/trace to print.acme.example), and any relevant PaperCut authentication logs. For hardware-related issues such as repeated toner failures or mechanical faults, also copy the Facilities team.
